PROFESSIONAL SUMMARY

- Software Engineer with 4.5+ years of professional experience in mobile application development, with strong hands-on expertise in React Native, TypeScript, JavaScript, Expo, Flutter, Dart, and iOS Swift.
- Experienced in developing robust, scalable, and user-centric Android and iOS applications, including production applications and end-to-end ownership from development through deployment.
- Strong knowledge of modern React Native development using React Hooks, functional components, React Navigation, Zustand, TanStack Query, Axios, Expo Dev Client, and Metro Bundler.
- Experienced with application architecture and state management including BLoC/Cubit, GetX, MVVM, MVC, Clean Architecture, and Dependency Injection.
- Skilled in REST API integration, JSON serialization/deserialization, API error handling and interceptors, Firebase services, local data handling, analytics, crash monitoring, debugging, QA, CI/CD, and app-store releases.
- Comfortable working directly with clients, backend teams, QA teams, and stakeholders, with a focus on clean code, reusable components, performance, maintainability, and delivery quality.

PROFESSIONAL EXPERIENCE

E2Logy Software Engineer	May 2026 - Present Ahmedabad, Gujarat
• Developing and enhancing the Cinch POS App and Cinch Subscription App using React Native and Expo. • Building cross-platform Android and iOS features with TypeScript, JavaScript, React Hooks, and functional components. • Implementing application state management with Zustand and server-state management, caching, queries, and mutations with TanStack Query. • Building navigation flows with React Navigation and integrating REST APIs using Axios. • Working with Expo Dev Client and Metro Bundler while developing reusable and maintainable mobile components. • Contributing to application debugging, testing, API integration, issue resolution, and release workflows. • Working on retail/POS workflows where the retail solution provides devices to customers and the POS application serves as the sales-end application.	
Yudiz Solution LTD Sr. Mobile Application Developer	Dec. 2021 - Apr. 2026 Ahmedabad, Gujarat
• Participated in the development and maintenance of production-grade mobile applications. • Developed and maintained applications using Flutter and iOS Swift, focusing on clean architecture, performance, stability, and maintainability. • Integrated REST APIs and third-party services while collaborating closely with backend teams. • Implemented application features, UI flows, local data handling, API communication, and production fixes. • Improved application stability and performance through code optimization and development best practices. • Reduced bugs and crashes by following QA processes, debugging practices, and release-quality checks. • Used Git versioning and CI/CD practices, including Dev/QA/Prod build flavors and store deployment workflows. • Worked directly with clients and stakeholders to understand requirements, provide updates, and deliver features. • Handled end-to-end application ownership across design, development, testing, debugging, and deployment. • Worked as a solo developer on multiple production applications.	

TECHNICAL SKILLS

React Native: React Native, Expo, TypeScript, JavaScript, React Hooks, Functional Components, React Navigation, Zustand, TanStack Query, Axios, Expo Dev Client, Metro Bundler
Flutter: Flutter, Dart, BLoC, Cubit, GetX, Flutter application development, reusable widgets/components
iOS / Swift: Swift, UIKit, SwiftUI, CoreData, Xcode, Cocoa Touch Framework
Architecture: MVVM, MVC, Clean Architecture, Dependency Injection, scalable project structures
APIs & Data: REST APIs, RESTful APIs, JSON Serialization/Deserialization, API Error Handling, API Interceptors, local data handling
Firebase: Firebase Authentication, Cloud Firestore, Firebase Cloud Messaging, Firebase Analytics, Crashlytics
Deployment & DevOps: Android Play Store, Apple App Store, Git, CI/CD, Dev/QA/Prod Build Flavors
Tools: Android Studio, Xcode, GitHub, Figma, Notion, Jira, Trello, Miro

AI & Developer Productivity: ChatGPT/GPT for code generation, debugging and logic optimization; Cursor for AI-assisted development/refactoring; Codex for code understanding/generation; Antigravity for AI-assisted workflows

PROJECTS

Cinch Retail & POS App

Project Name	Cinch Retail & POS App
Short Description	A retail technology solution focused on providing retail devices to customers and supporting the POS application as the sales end. The mobile solution includes customer-facing and sales-oriented workflows and is developed for Android and iOS.
Status	In Progress
Tools / Language	React Native, Expo, TypeScript, JavaScript, React Hooks, Functional Components, Zustand, TanStack Query, React Navigation, Axios, Expo Dev Client, Metro Bundler
Key Features	• Retail device/customer workflow support • POS sales-end application functionality • Cross-platform Android and iOS development • Application state management with Zustand • Server-state caching, queries and mutations with TanStack Query • REST API integration using Axios • Reusable mobile components and navigation flows

Cinch Subscription App

Project Name	Cinch Subscription App
Short Description	A subscription-focused mobile application developed alongside the Cinch POS solution using React Native and Expo.
Status	In Progress
Tools / Language	React Native, Expo, TypeScript, JavaScript, Zustand, TanStack Query, React Navigation, Axios
Key Features	• Subscription-related mobile workflows • Cross-platform Android and iOS features • API integration and server-state management • Reusable React Native components

BASMA

Project Name	BASMA
Short Description	A property booking platform with separate applications for tenants and landlords. Tenants can search, view and book properties, while landlords can list properties, manage booking requests and communicate with tenants.
Status	In Progress
Tools / Language	Flutter 3.35, Android Studio, Xcode
Key Features	• Landlord: add/manage rental properties • Landlord: upload property photos and details • Landlord: receive, approve or reject tenant booking requests • Tenant: search and view available rental properties • Tenant: filter properties by location and price • Tenant: send rental requests and book properties • Two separate apps with a user-friendly interface • Team Size: 1

MASHLife

Project Name	MASHLife
Short Description	A dance event booking platform where users can search and explore events worldwide, view events on an interactive map, promote their own events, and list products/services as vendors through the Shop section.
Status	Complete
Tools / Language	Flutter 3.35, Android Studio, Xcode

Key Features	• Search and explore dance events worldwide • View events on an interactive map • Create and promote events • Vendor functionality for products and services • Connect organizers, performers and attendees • Team Size: 1
---------------------	---

Greyy8 Vendor App & User App

Project Name	Greyy8 Vendor App & User App
Short Description	A two-app platform connecting vendors and users. Vendors create deals, gifts and coupons, while users redeem offers, earn coins/cashback, manage rewards and transfer cashback to bank accounts.
Status	In Progress
Tools / Language	Flutter 3.16.5, Android Studio, Xcode
Key Features	• Vendor: create deals, gifts and coupons • Vendor: manage promotions and campaigns • Vendor: analytics dashboard and user engagement tracking • Vendor: push notifications • User: discover and redeem offers • User: earn coins and cashback • User: digital coin wallet and rewards history • User: cashback transfer to bank account • User: transfer/share rewards • Team Size: 1

Reseda Church

Project Name	Reseda Church
Short Description	A church application providing prayer services, facility rental, Bible reading, funeral arrangements and donation functionality.
Status	Complete
Tools / Language	Flutter 3.16.5, Android Studio, Xcode
Key Features	• Prayer services • Facility rental • Bible reading • Funeral arrangements • Donations and related functionality • Team Size: 1

Stacked Up

Project Name	Stacked Up
Short Description	An all-in-one social media platform for marketers and business owners, designed to make it easier to plan, schedule and analyze content and share content directly to social media pages using Purple Bunny.
Status	In Progress
Tools / Language	Flutter 2.8, Android Studio, Xcode
Key Features	• Share images/content directly to social media accounts • Social media analytics • Team Size: 1

Q-Club

Project Name	Q-Club
Short Description	A golf-related application focused on golf team selection, score entry and scoreboard management.
Status	In Progress
Tools / Language	Flutter 3.0, Android Studio, Xcode

Key Features	• Team selection • Score entry • Scoreboard display • Team Size: 1
---------------------	---

Pick Up My Things Store

Project Name	Pick Up My Things Store
Short Description	An online shopping application for products and fresh produce, supporting same-day delivery or pickup.
Status	Completed
Tools / Language	Flutter 2.5, Android Studio, Xcode
Key Features	• Online grocery shopping • Fresh produce and products • Team Size: 1

Pick Up My Things Delivery

Project Name	Pick Up My Things Delivery
Short Description	A companion delivery application supporting product delivery for the Pick Up My Things platform.
Status	Completed
Tools / Language	Flutter 2.5, Android Studio, Xcode
Key Features	• Product delivery workflow • Team Size: 1

Shop & Me

Project Name	Shop & Me
Short Description	A hyperlocal grocery shopping application for food and vegetables, allowing customers to browse and search products.
Status	Completed
Tools / Language	Flutter 2.5, Android Studio, Xcode
Key Features	• Browse products • Search food and vegetables • Customer-end shopping experience • Team Size: 3

Shop & Me Delivery

Project Name	Shop & Me Delivery
Short Description	A delivery application for Shop & Me that delivers products to customers and supports fast delivery.
Status	Completed
Tools / Language	Flutter 2.2, Android Studio, Xcode
Key Features	• Delivery-boy registration • Order delivery to customers • Customer location tracking • Fast delivery option • Team Size: 1

ACHIEVEMENTS

First Prize - Online Charging Station Hackathon (October 2022)

- Developed and presented a winning solution for an online charging station platform.
- Implemented functionality that enabled users to find and book available charging slots efficiently.
- Demonstrated innovation and problem-solving skills.

Runner-Up - AI-Thon Treasure Hunt (January 2024)

- Successfully participated in an AI-themed treasure hunt.
- Demonstrated teamwork, analytical skills, adaptability, problem-solving and creative thinking in a competitive environment.

EDUCATION

GEC Modasa

March 2013 – May 2016

Bachelor of Engineering – Information Technology

Modasa, Gujarat

DECLARATION

I, Parth Prajapati, solemnly declare that the information provided above is true, accurate, and complete to the best of my knowledge and belief.
